Description

Here is the data

Here is a command to compute and plot a tree

```r
plot(nj(dist.dna(woodmouse, "J")))
```

We can also use, e.g., `{r, include = FALSE}`, to run the code, but not include the output from the command in the PDF.

This is the R-code we used (which is not going to be executed again, only displayed with syntax highlighting in the PDF):

```r
library("ape")
data(woodmouse)
image(woodmouse)
plot(nj(dist.dna(woodmouse, "J")))
```
